DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

Claims 65-74 are rejected under 35 U.S.C. 102(e) as being anticipated by van der Lely '911.

Van der Lely teaches a construction including an accommodation for animals reduces a liquid to a fine spray by the rubbing of the cow with brushes 44 due to the air/water mixing by rotation of the brushes resulting in a liquid atomization device. The device of Van der Lely is positioned in a milking compartment with a robot. The means for determining whether the animal is undergoing thermal stress is the operator operating the equipment. Regarding claim 72, the use of cameras in milking parlors is well-known and thus deemed to be obvious to a person of ordinary skill in the art at the time the invention was made, because it allows the operator to monitor numerous cows at the same time. Regarding claim 73, the use of a hydrometer is well-known in milking parlors for monitoring the water vapor in the building. Lastly, the operator is considered an odor monitor.
